

INDICATING SYSTEM

5

Abstract of the Disclosure

An indicating system in a device having a heat emitting member. The indicating system comprises a thermoelectric generator and an indicating device. The thermoelectric generator is adapted to thermally couple to the heat emitting member and configured to convert heat from the heat emitting element to 10 electrical energy. The indicating device is powered by the electrical energy and configured to provide indication of when a temperature level of the heat emitting member is above a temperature threshold.
